EXTRAS

Backup MX Server & Redundant DNS.....\$135.00/Year

Backup MX Provides a secondary mail server to hold your e-mail for you should the main e-mail server go offline for any reason. Once back online, mail will be delivered to the server.

The DNS service provides redundant name service for a domain. This service is designed for users that cannot allow their domain to become inaccessible. The servers providing DNS are located on physically and topologically separated networks to prevent any downtime caused by a single catastrophic event.

Prices subject to change. Hosting limited to availability. E & OE
